Specimen Label

Restricted Use Pesticide
Because pronamide has produced tumors in laboratory animals, this product is for retail sale to and use only by Certified Applicators or persons under their direct supervision, and only for those uses covered by the Certified Applicator’s certification.

Specialty Herbicide
*Trademark of Dow AgroSciences LLC

For use on: grasses (ornamental), woody ornamentals, nursery stock of ornamentals, and Christmas trees

Active Ingredient
pronamide: 3,5-dichloro-N-(1,1-dimethyl-2-propynyl) benzamide .......................................................... 50%
Inert Ingredients ........................................................................................................................................ 50%
Total .......................................................................................................................................................... 100%

EPA Reg. No. 62719-397

Keep Out of Reach of Children
CAUTION

Precautionary Statements
Hazards to Humans and Domestic Animals
Causes Moderate Eye Irritation

Avoid contact with eyes or clothing. Wash thoroughly with soap and water after handling.

Personal Protective Equipment (PPE):
Applicators and other handlers must wear:

- Coveralls over short-sleeved shirt and short pants
- Waterproof gloves
- Chemical-resistant footwear plus socks
- Chemical-resistant headgear for overhead exposure
- Chemical-resistant apron when cleaning equipment, mixing or loading

Clothing that has been drenched or heavily contaminated with this product’s concentrate should be disposed of in accordance with state or local regulations. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use enclosed cabs or aircraft in a manner that meet the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations
Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

First Aid
If swallowed: Call a physician or Poison Control Center. Drink one or two glasses of water and induce vomiting by touching back of throat with finger. If person is unconscious, do not give anything by mouth and do not induce vomiting.

If inhaled: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention.

If on skin: Wash with plenty of soap and water. Get medical attention if irritation persists.

If in eyes: Flush eyes with plenty of water. Call a physician if irritation persists.

Environmental Hazards
Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

Notice: Read the entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies elsewhere on this label. If terms are unacceptable, return at once unopened.

In case of emergency endangering health or the environment involving this product, call 1-800-992-5994. If you wish to obtain additional product information, visit our web site at www.dowagro.com.

Agricultural Chemical: Do not ship or store with food, feeds, drugs or clothing.

Directions for Use
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.
Agricultural Use Requirements

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water, is:

- Coveralls over short-sleeved shirt and short pants
- Waterproof gloves
- Chemical-resistant footgear plus socks
- Chemical-resistant headgear for overhead exposure

Non-Agricultural Use Requirement

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated area until sprays have dried.

Storage and Disposal

Prohibitions: Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

Storage: Store in a cool, dry place but not below 32°F (0°C). Do not remove package from container except for immediate use.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Disposal: Completely empty bag into application equipment. Then dispose of in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Steps to be Taken in Case Material is Released or Spilled: Sweep up and place in containers for recovery or disposal. Keep dusting to a minimum. Wear MSHA/NIOSH respirator for dusts encountered. Flush area with water. Keep spill out of all sewers and open bodies of water. Protective Clothing -Refer to Precautionary Statements.

General Information

Kerb® 50WP specialty herbicide is formulated as a wettable powder containing 50% active ingredient packaged in a 1 lb water-soluble pouch. Kerb 50WP is effective for the control of a wide range of grasses and certain broadleaf weeds. The product is a soil active herbicide with uptake by sensitive weeds occurring through the roots. Before using this herbicide for a specific crop use, study the following general use information that provides important instructions for the safe and effective application of the product.

Use Restrictions: Hand-spray applications of pronamide may be made only to ornamentals and nursery stock of ornamentals.

Chemigation: Do not apply this product through any type of irrigation system.

Weed Spectrum

Kerb 50WP is recommended for both preemergence and early postemergence control of winter annual and perennial grasses and chickweed and for preemergence control only of certain other broadleaf weeds and certain other grasses listed.

Weeds Controlled Both Preemergence and Early Postemergence

- barley, foxtail
- barley, volunteer
- bentgrass
- bluegrass, annual
- bluegrass, bulbous
- bluegrass, kentucky
- brome, downy (cheatgrass)
- chickweed, common
- chickweed, mouse-ear
- fescue, tall
- goatgrass, jointed
- oat, volunteer
- oat, wild
- orchardgrass
- quackgrass
- rye, volunteer
- ryegrass, Italian
- ryegrass, perennial
- velvetgrass
- wheat, volunteer

Weeds Controlled Only Preemergence

- barnyardgrass
- canarygrass
- carpetweed
- crabgrass, large
- dodder, field
- foxtail, yellow
- goosefoot, nettleleaf
- goosegrass
- henbit
- knottweed, prostrate
- lambsquarters, common
- lovegrass
- mallow, little (cheeseweed)
- morningglory, annual
- mustard, wild
- nettle, burning
- nightshade, black
- nightshade, hairy
- panicum, fall
- purslane, common
- radish, wild
- rocket, London
- shepherds purse
- smartweed, pale
- sorrel, red (from seed)
- tomato, volunteer

Note: The weed species controlled by Kerb 50WP are dependent on the rate used, specific crop culture involved, and the associated conditions of temperature, soil type and moisture availability. Refer to specific crop use directions for weed species controlled.
Dosage
The rate of Kerb 50WP required will vary depending on the crop culture involved and weed species to be controlled. See specific crop use directions for all dosage recommendations. All dosage recommendations listed in this label are in terms of pounds Kerb 50WP per broadcast acre. For banded application, the amount of Kerb 50WP used per acre should be reduced according to the following formula:

\[
\text{Band Width (in inches)} \times \frac{\text{Rate per Acre Broadcast}}{\text{Row Width (in inches)}} = \text{Amount Needed per Acre for Band Application}
\]

Timing and Application
Unless specific directions are given under the crop to be treated, Kerb 50WP should be applied in the fall or early winter, when temperatures do not exceed 55°F, but prior to freeze-up. Best weed control results occur when Kerb 50WP is applied preemergence to the weeds and when application is followed by rainfall or irrigation to move the product into the root zone of the germinating weeds.

Kerb 50WP should be thoroughly mixed in clean water at the recommended concentration and applied uniformly as a spray. For ground application, use a conventional low-pressure herbicide sprayer equipped with flat fan nozzles spaced and calibrated to uniformly deliver 20 to 50 gallons of spray per acre. For aerial applications apply in a coarse droplet spray at 5 to 10 gallons per acre. Accurately calibrate spray equipment prior to each use.

Compatibility
Kerb 50WP is compatible with most commonly used agricultural pesticides, crop oil concentrate and adjuvants. When preparing tank mixes, user should consult spray compatibility charts or State Cooperative Extension Service Specialists prior to actual use.

Note: Kerb 50WP is compatible with boron and crop oil concentrate; however, the water-soluble pouches must be completely dissolved before adding spray oils or products containing boron to spray mixtures.

Effect of Soil Type, Moisture and Temperature
Kerb 50WP is most active in coarse to medium textured soils of low organic matter and relatively inactive in peat or muck soils or mineral soils high in organic matter content at rates recommended in this label. Herbicidal activity is best in soils containing less than 4 percent organic matter. Use in soils with higher organic matter may result in inconsistent or incomplete weed control.

The herbicidal activity of Kerb 50WP is mainly through root absorption in sensitive weed species. Rain, melting snow or irrigation is essential following treatment to move Kerb 50WP into the root zone of germinating weeds.

Under field conditions, Kerb 50WP will remain relatively stable with little loss of herbicidal activity when soil temperatures are less than 55°F. As soil temperatures increase, degradation of the active ingredient takes place. Kerb 50WP may degrade rather quickly if left exposed on the soil surface in warm weather. If Kerb 50WP is applied when air temperatures exceed 85°F, it should be soil incorporated to a shallow depth (top two to three inches) or watered into the soil as soon as possible.

Cultural Considerations
For best results apply Kerb 50WP to a trash-free soil surface. Clean cultivation before application is preferable, but not necessary. To obtain optimum weed control in areas not clean cultivated, the area to be treated should be free of surface litter (dead or decaying crop and weed debris, mowing clippings, etc.). Trash-free areas create ideal conditions for rapid movement of Kerb 50WP into the weed root zone following rain or irrigation.

Rotation Crop Planting Information
Follow the directions given below when rotation crops will be planted to areas previously treated with Kerb 50WP:

Note: Crops not listed in Crop Groups A, B, C, D (below) must not be planted back sooner than 365 days after the last Kerb 50WP application regardless of the rate of Kerb 50WP used. Further, rotational crops are restricted to artichokes, apples, apricots, cherries, nectarines, peaches, pears, plums, prunes or grapes in fields previously planted with these crops and treated with more than 4 lb of Kerb 50WP (2 lb ai), per planted acre.

In fields planted with blackberries, boysenberries or raspberries and treated with more than 4 lb of Kerb 50WP per planted acre, rotational crops are restricted to these crops and artichokes, apples, apricots, cherries, nectarines, peaches, pears, plums, prunes or grapes.

Whether Kerb 50WP is bed-topped, banded or broadcast, the beds should be knocked down and the field cross-disced before rotation crops other than artichokes, lettuce, endive, radicchio or escarole are planted.

Where the Kerb 50WP treatment is to be followed by a rotation crop within 180 days of application, bed-topped or banded applications are suggested. Where rotation crops are to follow within 365 days of the Kerb 50WP treatment, the following rotational plan applies:

Waiting Period in Days before Planting the Crops Indicated

1 Planted Acre refers to acreage planted. Kerb 50WP at 4 lb of product per treated acre on two 5-inch treated bands (40-inch centers) is the equivalent of 1 lb of Kerb 50WP per planted acre. Kerb 50WP at 4 lb of product as a broadcast treatment (total acreage sprayed) is the equivalent of 4 lb of Kerb 50WP per planted acre.

2 Crop Group A: Artichokes
Crop Group B: Beans, cotton, carrots, celery
Crop Group C: Broccoli, cabbage, cauliﬂower, cucurbits, spinach, sugarbeets, onion, tomatoes
Crop Group D: Lettuce, endive, escarole, radicchio
Grasses (Ornamental)

Grown for Turf or Seed

General Information
Kerb 50WP is a selective herbicide recommended for the preemergence and postemergence control of annual bluegrass (*Poa annua*) from warm season grasses and the removal of perennial rye grass (*Lolium perenne*) from warm season grasses during spring transition. Warm season grasses include ornamental bermudagrass (*Cynodon dactylon*), zoysiagrass, St. Augustinegrass and centipedegrass or bermudagrass grown for seed.

Annual Bluegrass (*Poa Annua*) Control
Kerb 50WP will control annual bluegrass from pre-germination and seedling stages through tillering, heading and seed formation. Kerb 50WP acts slowly on seedling to mature annual bluegrass. Following application of Kerb 50WP, annual bluegrass may first become dark green and then gradually turn yellow and die over a 3- to 5-week period.

For effective control of annual bluegrass in turf or seed crops, moisture is necessary to move Kerb 50WP in the weed root zone. Refer to the Moisture Requirements section of this label for details.

Dosage and Timing
For annual bluegrass control Kerb 50WP is recommended at the rate of 1 to 3 lb of product (0.5 to 1.5 lb active ingredient) per acre broadcast application. The dosage rate required is dependent on the growth stage of annual bluegrass at time of application. Follow the dosage rate and timing recommendations given below:

<table>
<thead>
<tr>
<th>Annual Bluegrass Growth Stage</th>
<th>Kerb 50WP Lb per Acre¹</th>
<th>Broadcast Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preemergence or early postemergence</td>
<td>1 – 2²</td>
<td></td>
</tr>
<tr>
<td>Postemergence – early tillering to heading</td>
<td>1.5 - 2</td>
<td></td>
</tr>
<tr>
<td>Postemergence - seed forming stages</td>
<td>2 - 3</td>
<td></td>
</tr>
</tbody>
</table>

¹ One acre equals 43,560 sq ft.  
² Use the higher rate when longer preemergence residual control is desired.

Removal of Perennial Rye Grass from Warm Season Grasses
Kerb 50WP will remove postemergent perennial rye grass from warm season grasses during the spring to control the transition from cool season overseed to warm season grasses. Kerb 50WP works slowly to control mature perennial rye grass. After an application of Kerb 50WP, perennial rye grass will gradually die over a 4- to 6-week period. The length of this transition is dependent upon environmental factors such as temperature, rainfall and mowing height of the turf.

Dosage and Timing
For removal of perennial rye grass from warm season grasses, Kerb 50WP is recommended at a rate of 1 to 2 lb of product (0.5 to 1 lb active ingredient) per broadcast acre. It is best to apply Kerb 50WP to warm season grasses at 50% greenup. Application of Kerb 50WP to dormant warm season grasses can slow greenup.

Application
Mix the recommended amount of Kerb 50WP in clean water and apply uniformly with a low pressure ground sprayer in 20 to 50 gallons of water per acre or 0.5 to 1 gallon of water per 1000 sq ft. The sprayer should be equipped with flat fan nozzles, spaced to provide uniform distribution without skips or excessive overlapping of spray patterns.

Note: Avoid spraying on fairways or approaches that may drain onto bentgrass greens or to areas overseeded with sensitive cool season grasses. Do not make an application of a wetting agent for the purpose of frost protection or soil penetration to greens or tees 14 days prior to or after a Kerb 50WP application as injury may result.

Moisture Requirements
Kerb 50WP acts mainly through root absorption in sensitive weed species. If no rainfall occurs within a day or so of the application, a light overhead irrigation should be made to move the chemical into the weed root zone. Avoid heavy irrigations of more than 1 inch to reduce the possibility of excess washing or leaching of the chemical from the area of application.

Kerb Deactivation for Overseeding
Where it is desirable to reseed sooner than 90 days following the application of Kerb 50WP, an application of an activated charcoal such as Gro-Safe, is needed. Apply the activated charcoal at the rate of 10 lb per 1000 sq ft. Allow at least 14 days between the application of Kerb 50WP and the application of charcoal for control of emerged annual bluegrass. Reseed no sooner than 7 days following charcoal application.

Grasses (Ornamental) Turf or Seed Crop - Specific Use Restrictions
- This product may be used on seeded, sodded, or sprigged ornamental turf or turf grown for seed that is well established. Use of this product on turf that has been weakened by weather-, pest-, or disease- chemical-, or mechanical-related stress may increase the chances of turf injury.
- This product should only be applied to turf lawns that are composed of the following turfgrass species:
  - Bermudagrass (*Cynodon dactylon*),
  - Centipedegrass (*Eremochloa ophiuroides*),
  - St. Augustinegrass (*Stenotaphrum secundatum*),
  - Zoysiagrass (*Zoysia japonica*).
- Avoid spraying on hill sides, fairways, or approaches that may drain onto bentgrass greens or to areas overseeded with sensitive cool season grasses. Do not make an application of a wetting agent for the purpose of frost protection or soil penetration to greens or tees 14 days prior to or after a Kerb 50WP application as injury may result.
- Do not apply Kerb 50WP to areas that are to be overseeded with susceptible cool season grasses within 90 days of treatment unless deactivation is planned.
- Do not apply Kerb 50WP to dichondra, perennial bluegrass, annual and perennial ryegrasses, fescues and bentgrasses.
- Do not graze treated areas and do not feed clippings to livestock.
- Do not apply more than one application of Kerb 50WP per season and do not apply Kerb 50WP at rates higher than 3 lb product (1.5 lb active ingredient) per acre.
Woody Ornamentals, Nursery Stock of Ornamentals, Christmas Trees

General Information
Kerb 50WP is a selective herbicide recommended for fall applications to established woody ornamentals, nursery stock of ornamentals and Christmas trees for the control of winter annual and perennial grasses and certain broadleaf weeds.

Crop Tolerance
At recommended rates of Kerb 50WP the following trees and shrubs are tolerant to topical applications made in the fall:

- arborvitae
- ash
- azalea
- barberry
- basswood
- beech
- birch
- boxwood
- bradford pear
- cedar
- cotoneaster
- dogwood
- douglas fir
- eastern redbud
- elm
- euonymus
- fir
- firethorn
- flowering cherry
- flowering crabapple
- flowering quince
- forsythia
- ginkgo
- hawthorn
- hemlock
- holly
- honey locust
- juniper
- lilac
- linden
- London plane
- magnolia
- maple
- mock orange
- mountain ash
- mountain laurel
- oak
- Ohio buckeye
- pine
- poplar
- privet
- rhododendron
- spirea
- spruce
- sweetgum
- sycamore
- tuliptree
- viburnum
- walnut
- willow
- yew

Kerb 50WP should be used on established trees and woody ornamentals. Kerb 50WP is not recommended for use on seedling trees or shrubs less than one year old or to fall transplanted stock transplanted less than one year or to spring transplanted stock transplanted less than six months.

Weed Control
Kerb 50WP is effective in fall applications at the rate of 2 to 4 lb of product (1 to 2 lb active ingredient) per broadcast acre for the preemergence and postemergence control of susceptible winter annual and perennial grasses and chickweed and for preemergence control only of other labeled broadleaf weeds listed on this label. Refer to chart in Dosage and Timing section below for specific weeds controlled.

Dosage and Timing
Kerb 50WP is recommended in a single, fall application, either directed or topically applied, to woody ornamentals, nursery stock of ornamentals or Christmas trees at the rate of 2 to 4 lb of product (1 to 2 lb active ingredient) per broadcast acre. Application of Kerb 50WP should be made in the fall prior to leaf drop and soil freeze-up. For control of winter annual or perennial grasses or chickweed, applications can be made either preemergence or postemergence to the weeds. For control of other labeled broadleaf weeds, preemergence applications must be used to achieve control.

The dosage rate required will depend on the weed species present in the area to be treated. Follow the weed control recommendations given in the chart below:

<table>
<thead>
<tr>
<th>Weeds Controlled</th>

</tbody>
</table>

Application
Mix the recommended amount of Kerb 50WP in clean water and apply uniformly in 20 to 50 gallons per acre. Use a low pressure ground sprayer equipped with flat fan nozzles spaced to provide uniform distribution. Dosage recommendations listed on this label are for surface broadcast application. For banded treatments down the row, the amount of Kerb 50WP used per acre should be reduced according to the following formula:

\[
\text{Amount Needed per Acre for Band Application} = \text{Band Width (in inches)} \times \frac{\text{Rate per Acre Broadcast}}{\text{Row Width (in inches)}}
\]

Kerb 50WP should not be soil incorporated.

Note: Most ornamental turf grass species and ground covers are sensitive to Kerb 50WP. Care should be exercised to avoid contact of Kerb 50WP with these plants from either direct application, spray drift or from applications to areas that may drain onto established ornamental turf and ground cover.

Soil and Moisture Requirements
Kerb 50WP is most active in coarse to medium textured soils of low organic matter and is relatively inactive in peat or muck soils or mineral soils high in organic matter content at rates recommended in this label. Herbicidal activity is best in soils containing less than 4 percent organic matter. Use in soils of higher organic matter content may result in inconsistent or incomplete weed control.

Kerb 50WP acts mainly through root absorption in sensitive weed species. Dependable rainfall or overhead irrigation is essential following application for effective weed control.

Wood Ornamentals, Nursery Stock of Ornamentals/Christmas Trees - Specific Use Restrictions
- Apply Kerb 50WP in the fall prior to soil freeze-up.
- Do not soil incorporate Kerb 50WP.
- Do not harvest plants for food or feed for at least one year after treatment.
- Do not make more than one application of Kerb 50WP per year and do not apply Kerb 50WP at rates higher than 4 lb of product (2 lb ai) per acre.
ATTENTION: This product contains propyzamide (pronamide) a chemical known to the State of California to cause cancer.

Terms and Conditions of Use
If terms of the following Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies are not acceptable, return unopened package at once to the seller for a full refund of purchase price paid. Otherwise, use by the buyer or any other user constitutes acceptance of the terms under Warranty Disclaimer, Inherent Risks of Use and Limitation of Remedies.

Warranty Disclaimer
Dow AgroSciences warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below. Dow AgroSciences MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

Inherent Risks of Use
It is impossible to eliminate all risks associated with use of this product. Plant injury, lack of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unfavorable temperature, soil conditions, etc.), abnormal conditions (such as excessive rainfall, drought, tornadoes, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Dow AgroSciences or the seller. All such risks shall be assumed by buyer.

Limitation of Remedies
The exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Dow AgroSciences’ election, one of the following:

1. Refund of purchase price paid by buyer or user for product bought, or
2. Replacement of amount of product used

Dow AgroSciences shall not be liable for losses or damages resulting from handling or use of this product unless Dow AgroSciences is promptly notified of such loss or damage in writing. In no case shall Dow AgroSciences be liable for consequential or incidental damages or losses.

The terms of the Warranty Disclaimer, Inherent Risks of Use, and this Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of Dow AgroSciences or the seller is authorized to vary or exceed the terms of the Warranty Disclaimer or this Limitation of Remedies in any manner.
