Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered label.

This labeling must be in the possession of the user at the time of application.

Read the Precautionary Statement, Environmental Hazards, Storage and Disposal statements, and Conditions of Sale and Warranty statement appearing on the container label.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

GENERAL INFORMATION

Under this label, Paramount® herbicide is intended for use in grass grown for seed production in Minnesota. When used as directed, Paramount will provide suppression or control of weed species listed.

*For improved control, add a labeled tank mix product that is active on listed species.
APPLICATION INSTRUCTIONS

Paramount® herbicide may be applied by ground. Applications must be made to actively growing weeds. The most effective control of annual weeds will result when applications are made when weeds are small.

Use 5 – 30 gallons of water per broadcast acre. When weed foliage is dense, higher spray volumes may be required.

SPRAY ADDITIVES

Paramount should be applied with 1.5 pints per acre of crop oil concentrate or methylated seed oil plus a nitrogen fertilizer source (AMS at 2.5 lb/acre or UAN at 1 gallon/acre).

TANK MIXING INFORMATION

Paramount may be tank mixed with other herbicides labeled for use in grasses grown for seed, unless prohibited on the respective product label. The most restrictive labeling applies to tank mixes.

GRASS GROWN FOR SEED

For use in the following grasses grown for seed:

Cool Season Grasses:
- Bromegrass; smooth, meadow, smooth X meadow cross
- European Dunegrass
- Fescue; fine, tall
- Junegrass
- Kentucky Bluegrass
- Quackgrass
- Needlegrass; green
- Orchardgrass
- Ryegrass; annual, indian, perennial
- Wheatgrass; bluebunch, crested, fairway, fairway X crested cross, intermediate, pubescent, siberian, slender, tall, thickspike, western, bluebunch X quack cross
- Wildrye; altai, basin, beardless, dahurian, mammoth, russian

Warm Season Grasses:
- Bermudagrass
- Bluestem; big, little, sand
- Grama; blue, side-oats
- Sandreed; prairie
- Switchgrass

Apply Paramount at 5.3 ounces per acre for control of annual grasses and broadleaf weeds. For best annual grass control, Paramount should be applied when grassy weeds are less than 2” tall.

RESTRICTIONS AND LIMITATIONS

Maximum seasonal use rate: Do not apply more than a total of 16 ounces of Paramount herbicide per acre, per calendar year.

Restricted Entry Interval (REI): 12 hours

Crop Rotation Restrictions: Refer to and follow the EPA-registered container label for specific information on crop rotations following Paramount application.

Rainfast period: Paramount is rainfast 6 dry hours after application.

Wind Speed for Ground Applications: Do not apply Paramount when wind is blowing more than 10 mph.

DO NOT apply to weeds under stress due to lack of moisture, flooding, hail damage, herbicide injury, mechanical injury, or cold temperatures, as unsatisfactory control may result.

DO NOT use selective application equipment such as recirculating sprayers, wiper applicators, or shielded applicators.

DO NOT allow livestock to graze in treated areas.

DO NOT feed treated grasses, seed or seed screenings to livestock.

DO NOT apply to water or to areas where surface water is present.

DO NOT apply to irrigation ditches or areas that act as a channel for water entering cropland.

DO NOT apply Paramount using aerial equipment unless permitted by supplemental labeling.

DO NOT apply through any type of irrigation equipment.
Drift:

DO NOT allow Paramount® herbicide to drift onto other desirable plants, especially sensitive crops belonging to the following plant families:

1. Solanaceae [tomato, potato, tobacco, eggplant, peppers (Capsicum), among others]
2. Umbelliferae (celery, parsley, carrots, among others)
3. Leguminosae (alfalfa, green bean, among others)
4. Convolvulaceae (sweet potato, among others)
5. Chenopodicaeae (spinach, sugar beet, among others)
6. Malvaceae (okra, among others)
7. Cucurbitaceae (watermelon, cantaloupe, squash, pumpkin, among others)
8. Compositae (lettuce, sunflowers, among others)
9. Linaceae (flax)

DO NOT allow spray containing Paramount to drift onto areas where tomatoes are to be planted, have been planted, or onto emerged tomatoes, as severe injury will occur.

DO NOT premix Paramount with fungicides, herbicides, insecticides, additives, or fertilizers as contamination of mixing equipment and movement of Paramount to offsite mixing areas can occur.
