FOR DISTRIBUTION AND USE ONLY WITHIN OREGON

EPA Reg. No. 241-337
EPA SLN No. OR-980020

FOR WEED CONTROL IN PERENNIAL GRASSES
GROWN FOR SEED PRODUCTION

THIS LABEL VALID UNTIL DECEMBER 31, 2008 OR UNTIL OTHERWISE AMENDED, WITHDRAWN, CANCELED, OR SUSPENDED.

ACTIVE INGREDIENT:
pendimethalin (N-(1-ethylpropyl)-3,4-dimethyl-2,6-dinitrobenzenamine) ............................................. 37.4%

INERT INGREDIENTS* ...................................................................................................................... 62.6%

TOTAL ................................................................................................................................................100.0%

(1 gallon contains 3.3 pounds of pendimethalin)
*Contains aromatic naphtha

OBSERVE ALL PRECAUTIONARY STATEMENTS, MIXING AND APPLICATION INSTRUCTIONS, AND ROTATIONAL CROP RESTRICTIONS IN THE PROWL 3.3 EC LEAFLET LABEL BEFORE USING.

KEEP OUT OF REACH OF CHILDREN
CAUTION!/¡PRECAUCIÓN!

If you do not understand this label, find someone to explain it to you in detail.

In case of an emergency endangering life or property involving this product, call day or night, 800-832-HELP (4357).
ENVIRONMENTAL HAZARDS

This product is toxic to fish. DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in adjacent aquatic sites. DO NOT contaminate water when disposing of equipment washwaters.

DIRECTIONS FOR USE

For application to established (6 or more tillers per plant) Kentucky bluegrass, tall fescue, orchardgrass, perennial ryegrass, bentgrass or fine fescue fields.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application.

Observe all cautions and limitations in this label and the labels of products used in combination with Prowl® 3.3 EC herbicide. The use of Prowl 3.3 EC not consistent with this label can result in injury to crops, animals, or persons. Keep containers closed to avoid spills and contamination.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide protection.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls.
- Chemical-resistant gloves, such as barrier laminate, butyl rubber > 14 mils, nitrile rubber > 14 mils, neoprene rubber > 14 mils, or viton > 12 mils.
- Shoes plus socks.

GENERAL INFORMATION

Special Precautions

Prowl 3.3 EC controls most annual grasses and certain broadleaf weeds as they germinate, but it will not control established weeds. Destroy existing weeds before applying Prowl 3.3 EC (except as recommended in specific postemergence combination treatments). Unusually cold, excessively wet, or hot and dry conditions that delay germination or extend germination over a long period of time can reduce weed control.
Applied according to label directions and under normal growing conditions, **Prowl® 3.3 EC herbicide** or Prowl 3.3 EC tank-mix combinations will not cause crop injury. Over-application can result in crop stand loss, crop injury, or rotational crop injury.

Uneven application or improper soil incorporation can decrease weed control or cause crop injury. Soil incorporation deeper than recommended can reduce weed control.

Seedling diseases, cold weather, excessive moisture, shallow or deep planting, low or high soil pH, high soil salt concentration, or drought can weaken seedlings and plants, and increase the possibility of crop damage from Prowl 3.3 EC. Under these conditions, crop yields can be reduced.

Use of Prowl 3.3 EC in accordance with label directions is expected to result in normal growth of rotational crops in most situations; however, various environmental and agronomic factors make it impossible to eliminate all risks associated with the use of this product and, therefore, rotational crop injury is always possible.

Naturally occurring biotypes* of some of the weeds listed on this label may not be effectively controlled by this and/or other products with the mitotic-inhibiting mode of action. Other herbicides with the mitotic-inhibiting mode of action include other dinitroaniline herbicides such as Treflan™ herbicide, TRI-4® herbicide and Sonolan® herbicide. If naturally occurring mitotic inhibiting resistant biotypes are present in a field, Prowl 3.3 EC and/or any other mitotic inhibiting mode of action herbicide should be tank-mixed or applied sequentially with an appropriate registered herbicide having a different mode of action to ensure control.

* A weed biotype is a naturally occurring plant within a given species that has a slightly different, but distinct, genetic makeup from other plants.

See your BASF representative for additional information.

**PERENNIAL GRASSES FOR SEED PRODUCTION**

Prowl 3.3 EC controls most annual grasses and certain broadleaf weeds as they germinate, but it will not control established weeds. It may be necessary to control weeds that have germinated prior to the application of Prowl 3.3 EC with an alternative herbicide that has postemergence activity on these weeds.

Prowl 3.3 EC may cause temporary injury to grass stands. Tank mixtures of Prowl 3.3 EC may result in enhanced crop injury. Diseases, extremely cold weather, drought, extensive frost heaving, low or high pH, or salinity may weaken stands and make them more susceptible to herbicidal damage.

Apply at the beginning of significant fall rains and prior to weed germination. Uniformly apply 4.8 to 7.2 pints of Prowl 3.3 EC per acre in 10 or more gallons of water per acre with ground equipment. The higher application rate should be used where heavy weed seedling or volunteer seedling infestations are anticipated.

**CHEMIGATION APPLICATION**

Prowl 3.3 EC may be applied through sprinkler irrigation systems including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move irrigation systems. For complete instructions and precautions regarding chemigation, refer to the main leaflet label for Prowl 3.3 EC.

Prior to weed germination, uniformly apply 4.8 to 7.2 pints of Prowl 3.3 EC per acre through sprinkler irrigation systems.

If soil condition is extremely dry, a pre-chemigation irrigation of 1/4 - 1/2 inch is recommended to enhance the incorporation of Prowl 3.3 EC. Chemigate as soon as possible after the pre-chemigation irrigation.

**RESTRICIONS**

DO NOT apply more than 7.2 pints of Prowl 3.3 EC per crop season. DO NOT apply if surface water is present. DO NOT apply when wind conditions favor spray drift. Prowl 3.3 EC treatments are most effective when adequate rainfall or overhead irrigation is received within 7 days after application. Effectiveness of Prowl 3.3 EC may be increased by removal of excess straw and crop residue by such methods as crew cutting, propane flaming, or open field burning when local regulations allow.
DO NOT apply this herbicide within 1 year (365 days) of harvesting grass hay.
DO NOT graze livestock in treated fields within 1 year (365 days) of application.

Follow Crop Restrictions
Any crop labeled for Prowl 3.3 EC preplant incorporated (PPI) use can be planted the same year without adverse effect.

For Prowl 3.3 EC use rates up to 5 pints/acre: Wheat may be planted 12 months following a Prowl 3.3 EC application. Other crops may be planted 18 months following an application of Prowl 3.3 EC.

For Prowl 3.3 EC use rates up to 7.2 pints/acre: Crops other than sugar beets, red beets and spinach may be planted 18 months following application. Sugar beets, red beets and spinach may be planted 24 months after application.

WEEDS CONTROLLED OR SUPPRESSED

Prowl 3.3 EC applied according to this label, prior to weed emergence, will control the following weeds in addition to those weeds listed on the Prowl 3.3 EC leaflet label:

**GRASSES**
- Bluegrass (annual) (*Poa Annua*)
- Shattercane (*Sorghum bicolor*)
- Wild proso millet (*Panicum miliaceum*)
- Woolly cupgrass (*Eriochloa villosa*)
- Rattail fescue (*vulpia myuros*)
- Volunteer ryegrass
- Volunteer fescue

**BROADLEAF WEEDS**
- Chickweed (common) (*Stellaria media*)
- Dodder (*Cuscuta spp.*)
- Fiddleneck (*Amsinckia intermedia*)
- Henbit (*Lamium amplexicaule*)
- Knotweed (prostrate) (*Polygonum aviculare*)
- Pennsylvania smartweed (*Polygonum pensylvanicum*)
- Puncturevine (*Tribulus terrestris*)
- Shepherdspurse (*Capsella bursa-pastoris*)
- Velvetleaf (Buttonweed) (*Abutilon theophrasti*)

This labeling must be in the possession of the user at the time of herbicide application.
